# Week 13, Day 5 Patterns and sequences

#### Each day covers one maths topic. It should take you about 1 hour or just a little more.

1. If possible, watch the **PowerPoint presentation** with a teacher or another grown-up.

OR start by carefully reading through the Learning Reminders.

2. Think you've got it? Have a go at the **Investigation** or **Practical Activity**.

 Have I mastered the topic? A few questions to Check your understanding.

#### Questions

The fourth term of a sequence is 18, the fifth is 23 and the sixth is 28. Write the next four terms. Then write the first three terms. Describe the sequence.

The third term of a sequence is 4, the fifth is 16 and the seventh is 64. Write the next four terms. Then write the first two terms. Describe the sequence.

Write the 10<sup>th</sup> term in this sequence: 1.5, 3, 4.5, 6, 7.5...

#### Answers

The fourth term of a sequence is 18, the fifth is 23 and the sixth is 28. Write the next four terms. 33, 38, 43, 48 Then write the first three terms. 3, 8, 13 Describe the sequence. It starts at 3 and increases by 5 each time. Some children may notice that each term is a multiple of 5, subtract 2. The nth term is 5n - 2.

The third term of a sequence is 4, the fifth is 16 and the seventh is 64. Write the next four terms. 128, 256, 512, 1024 Then write the first two terms. 1, 2 Describe the sequence. It starts at 1 and doubles each time. (Primary children aren't expected to see this, but this sequence is the sequence of powers of 2:  $2^{0}$ ,  $2^{1}$ ,  $2^{2}$ ,  $2^{3}$ ,  $2^{4}$ ... Then nth term is  $2^{n-1}$ .)

Write the 10<sup>th</sup> term in this sequence: 1.5, 3, 4.5, 6, 7.5... 15 Some children may have spotted that each term is 1.5 x its position in the sequence. The nth term is 1.5n.
